Two dots: which curve moved

The two dots are a town's churros market in equilibrium, last winter and this winter; only one curve moved between them. Which curve moved, and which way?

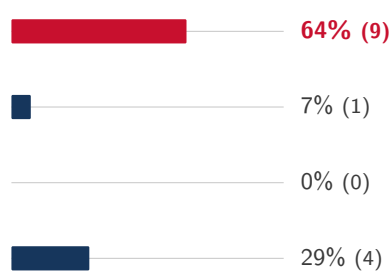

Opportunity cost: a ticket already paid

You paid €30 for a ticket to Saturday's basketball game; it cannot be refunded or resold. Then a café near your home offers you a €45 shift at the same time. The train to the arena and back costs €5. What is the opportunity cost of going to the game?

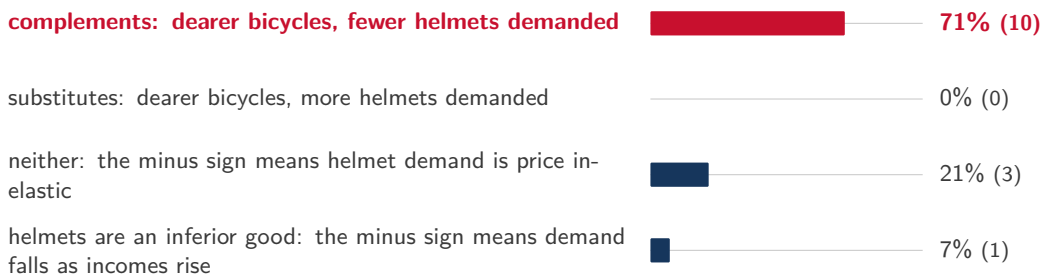

Positive or normative: a forecast

"Doubling the hours of physical education in schools would cut childhood obesity in Spain by a third." Which is right about this sentence?

Cross-price elasticity: the sign

The cross-price elasticity of demand for bike helmets with respect to the price of bicycles is -0.8. What does the sign tell you?

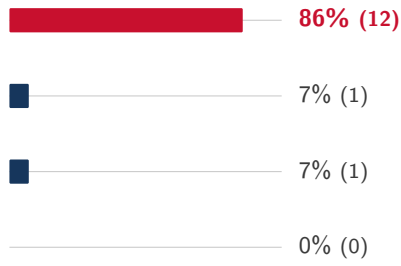

Both curves move: what is certain

In the same year, the fashion for plant-based burgers fades and a cheaper plant protein cuts every maker's costs. What does the model say for sure?

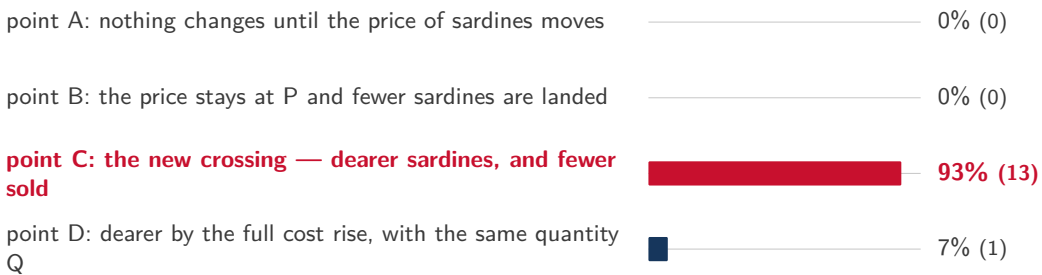

Same price, more cans

A campus kiosk keeps its price at €2 a can all term. At that price, students want 60 cans a day in early September and 100 a day in early October. In the chapter's words, what changed: demand, or the quantity demanded?

Dearer diesel: where the market settles

A port's market for fresh sardines is at A (price P, quantity Q). Then diesel for the fishing boats gets dearer; the dashed line labelled "supply after" is the new supply curve. Where does the market settle?

Hardest three

Two dots: which curve moved — 50% correct

supply shifted left (the price rose and the quantity fell)

most chosen instead: demand shifted left (43%)

Opportunity cost: a ticket already paid — 50% correct

€50: the €45 shift given up plus the €5 train; the €30 ticket is sunk

most chosen instead: €45: the shift you give up, nothing else (43%)

Positive or normative: a forecast — 64% correct

positive: evidence could confirm or refute it, even if it turns out false

most chosen instead: it is normative: a forecast is only an opinion until it comes true (29%)
