Quiz 2 — how the class did

12

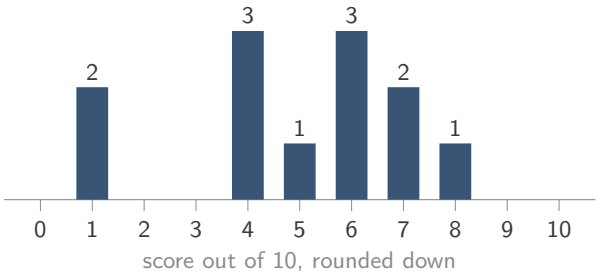

answer strips

5.1

mean score out of 10

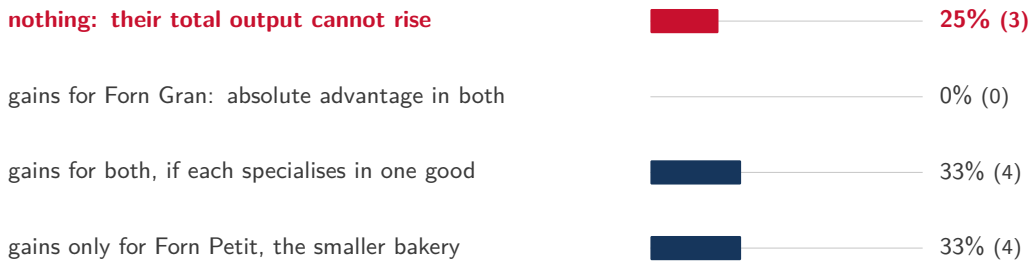

5.75

median · range 1–8.5

Same costs, no gains from trade

Forn Gran has 6 bakers and Forn Petit has 2. In either bakery, one baker makes 40 loaves or 20 cakes a day, and practice does not change this. What can specialisation and trade between the two bakeries achieve?

1 left it blank

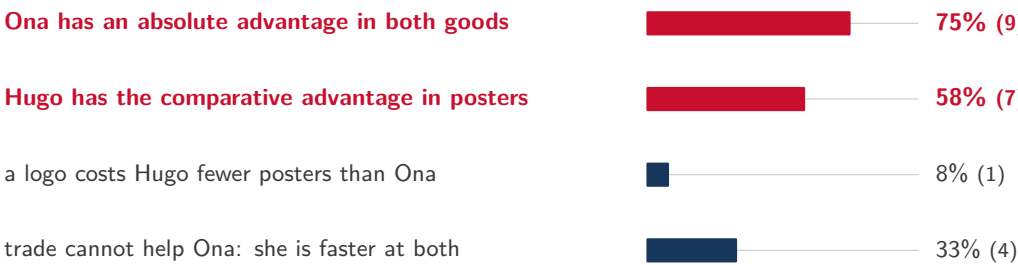

Consuming beyond the frontier

In a year, Menorca's workers can make 600 tonnes of cheese or 20 thousand pairs of shoes, or any mix on a straight-line frontier. Menorca makes only cheese and trades 15 tonnes of cheese for each thousand pairs of shoes. How much cheese does it keep if it buys 16 thousand pairs of shoes?

Two frontiers: absolute vs comparative (select all that apply)

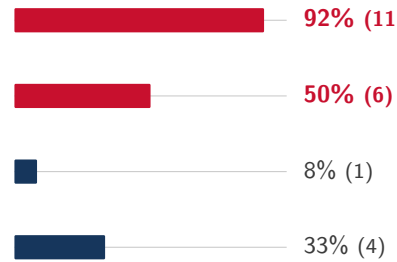

Ona and Hugo each design logos and posters for 40 hours a week. The graph shows each one's weekly frontier. Which statements are true?

exact set correct: 42% · **average credit: 46%** · the shares add to more than 100 %: several circles could be marked

Injections into the loop (select all that apply)

In Spain's circular flow, money that enters the loop between Spanish households and Spanish firms from outside that loop (from the government, from banks or from abroad) is an injection. Which of these are injections?

exact set correct: 42% · **average credit: 50%** · the shares add to more than 100 %: several circles could be marked

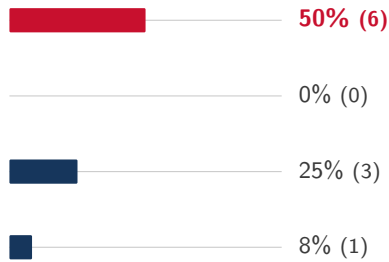

Same numbers, different advice

Suppose two economists agree on the numbers: a higher tax on cruise passengers in Barcelona would mean 20 % fewer visitors and 500 fewer jobs at the port. One supports the tax; the other opposes it. In the book's terms, why?

The price at which both gain

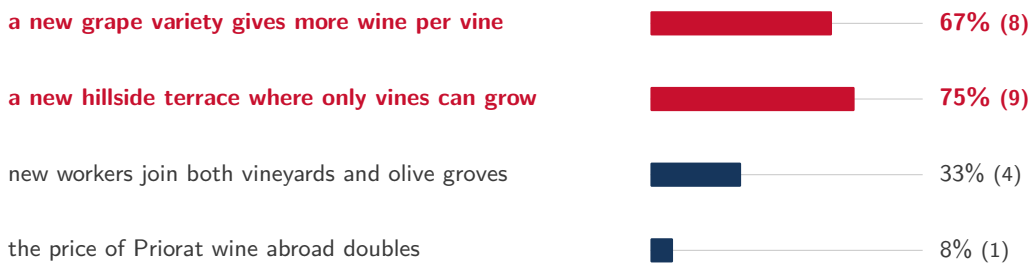

In a day, a worker in Morocco can grow 40 kg of tomatoes or farm 10 kg of fish; a worker in Norway, 12 kg of tomatoes or 6 kg of fish. Norway sells fish to Morocco and buys tomatoes. At which price do BOTH countries gain?

2 left it blank

What moved the frontier (select all that apply)

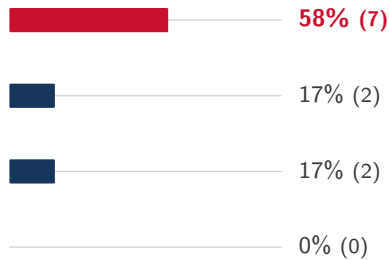

A valley in the Priorat grows grapes for wine and olives for oil. Its frontier moved from "before" to "after". Which events could explain this?

exact set correct: 33% · **average credit: 54%** · the shares add to more than 100 %: several circles could be marked

Opportunity cost between two points

The Ebro delta's farmland can grow rice or vegetables; the curve is its production possibilities frontier. The delta moves from D to C. What does each extra thousand tonnes of vegetables cost?

1 left it blank

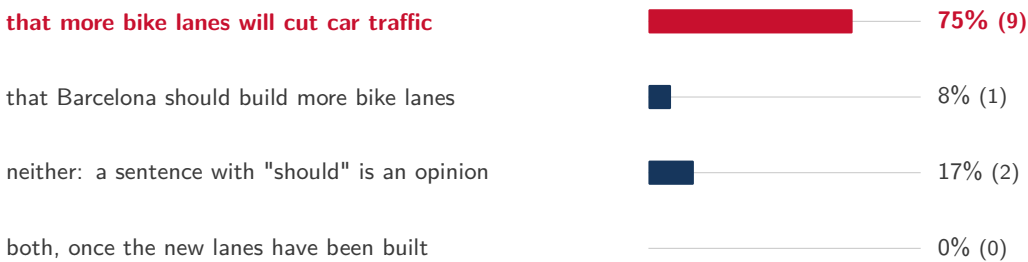

Circular flow: land and rent

The diagram is the circular flow of an economy with only households and firms. The Puig family rents its farmland to a wine company. On which arrows do the use of the land and the rent travel?

Which part could data settle

"Barcelona should build more bike lanes, because more bike lanes will cut car traffic." Which part of this sentence could evidence confirm or refute?

Hardest three

Same costs, no gains from trade — 25% correct

nothing: a cake costs 2 loaves in both shops, so total output cannot rise

most chosen instead: gains for both, if each specialises in one good (33%)

Consuming beyond the frontier — 42% correct

360 tonnes of cheese ($600 - 16 \times 15$)

most chosen instead: 240 tonnes (42%)

Two frontiers: absolute vs comparative — 46% credit · 42% exactly right

Ona has the absolute advantage in both; Hugo the comparative advantage in posters

most chosen instead: trade cannot help Ona: she is faster at both (33%)
